KEY WORDS

acne juvenilis, topical treatment, colloidal silica, benzoyl peroxide.

ABSTRACT

This study was designed to assess the efficacy of colloidal silica product in comparison to the leading OTC brand in children and youths suffering with juvenile acne. The study concluded that colloidal silica product proved to be an effective medication for juvenile acne. Dermatological improvement was seen in the reduction of amount of sebum, comedones and inflammation. Colloidal silica product was found to be more effective than the leading OTC brand of acne treatment tested. There were no unwelcome side effects observed by the colloidal silica testers.
